

SmartShield

Improving Infection Control for Healthcare

SmartShield improves infection control practices by providing an additional layer of protection for surfaces already being cleaned with disinfectants. SmartShield creates an invisible antimicrobial barrier that lasts up to 90 days. Quick-drying, SmartShield sets in 3 minutes.

Green

SmartShield's patented, water-based solution is EPA approved and the only "green" antimicrobial solution available. It is not harmful to humans or the environment, contains no toxins, is odorless and safe for humans and animals. SmartShield contains no triclosan, heavy metals, arsenic, bleach, titanium or phenols. It is non-leaching, non-off-gassing and decomposes into trace amounts of carbon, carbon dioxide, nitrous dioxide and silicon dioxide.

SmartShield complements your current infection control practices. Regular cleaning with disinfectants does not remove SmartShield from the applied surface. SmartShield works on fabrics, porous and non-porous surfaces and does not transfer to humans. It provides 24/7 antimicrobial protection between regular disinfectant cleanings.

SmartShield utilizes a "mechanical kill" technology (vs. poison/chemical kill), which does not facilitate bacterial adaptation (superbugs, MRSA). SmartShield is an effective, low-cost strategy to improve your existing infection control practices.

Binds to any surface

- Porous, non-porous, fabrics
- Doorknobs, desks, phones
- Computers, scanners, barcode readers
- Point of care carts
- Furniture, drapes, uniforms
- Restrooms
- AC ducts
- Food prep areas

Sizes

3 oz Spray	covers 8 sq. ft.
32 oz Spray	covers 80 sq. ft.
8 oz Concentrate	covers 1,200 sq. ft.
